

Confidential Survey and PLS-SEM Research Project

First-Author Quantitative Research | Manuscript Under Revision

Confidentiality boundary

This summary intentionally withholds the manuscript title, abstract, research topic, theoretical framework, hypotheses, questionnaire, constructs, sample details, model outputs, findings, conclusions, references, and raw or cleaned data.

End-to-end workflow

Research design -> questionnaire development -> response-quality screening -> data cleaning and coding -> measurement-model assessment -> structural-model assessment -> interpretation -> first-author manuscript drafting and revision

Technical capabilities

Stage	Demonstrated capability
Data preparation	Response screening, coding, missing-value review, and analytical-file documentation
Reliability	Outer loadings, Cronbach's alpha, and composite reliability
Validity	Average variance extracted, Fornell-Larcker, and HTMT
Structural model	VIF, bootstrapped paths, R-squared, Q-squared, and effect sizes
Communication	Methods writing, results interpretation, limitations, and revision control

Tools

Excel for response screening and cleaning | SPSS for descriptive and supporting checks | SmartPLS 4 for PLS-SEM | Word for academic drafting and revision

First-author contribution

Questionnaire development, quality-control design, data cleaning and coding, model assessment, statistical interpretation, manuscript drafting, and revision.

Research-quality practices

Maintained separation between raw and analytical data; documented exclusion rules; checked consistency between statistical outputs and manuscript claims; distinguished association from causation; and preserved participant confidentiality.

Public disclosure policy

No study-specific information will be made public before submission or authorization. Detailed materials may be discussed privately only when appropriate and with permission from the research team.

Portfolio value

The project demonstrates the ability to manage a complete quantitative research workflow without disclosing unpublished intellectual content or confidential respondent information.
